

Executive Summary: Customer Churn Analysis

Date: 2025-10-18

This package contains a full end-to-end churn analysis workflow (Python).

Dataset: Synthetic telco dataset with 7043 rows shaped like the Kaggle Telco Customer Churn.

Key findings (from synthetic data):

- Month-to-month contracts show the highest churn rate.
- Higher monthly charges and short tenure are associated with higher churn.

Deliverables included:

- Jupyter notebook with EDA, modeling (Logistic Regression, Random Forest), and SHAP notes.
- Cleaned CSV (telco_churn_clean.csv).

Next steps:

- Replace synthetic CSV with Kaggle CSV (if required).
- Retrain models, run SHAP plots, and prepare slide deck for stakeholders.
